### **Dr. V. DHAVASHREE**

DGO, MRCOG (UK), DLS & DRM (Germany), ART (Singapore)

Specialist in Highrisk Obstetrics

## What is a High Risk Pregnancy?

A pregnancy is considered high risk when there are potential complications that could affect the mother, the baby, or both.

## What can cause a High Risk Pregnancy?

Factors that increase the risk of pregnancy include:

- 01 Pregnancies with preterm labour
- 02 Pregnancies with multiple pregnancy (Twins / Triplet pregnancies)
- 03 Underweight or overweight mothers
- 04 Mother's age ( under 18 or over 35)
- 05 A previous baby with a birth defect, especially heart or genetic problems
- 06 Pre-existing problems like Diabetes, high blood pressure, Asthma, seizure disorder, renal problems, heart problems, immunological problems

Most life threatening complications can be predicted & prevented when given proper care.

Consult the Obstetrician of SKS Hospital to get the special care you need during your pregnancy.
